# 1. Current Status of the International Online Robotics Trading Market

The robot NFT market has received great attention in recent years.

Robot NFT works are unique digital works combined with robot design, artificial intelligence, and virtual reality, and are digital assets that can prove and trade ownership, and their investment and scarcity are increasing in interest.

The robot NFT market is growing with the overall growth of NFTs, and in Korea, the number of kidults (a compound word of kids + adult: a generation that consumes products such as robots as adults) is increasing, and the market for kidults is exploding worldwide.

Trading of robotic NFT works is mainly done on online NFT marketplaces, where works can be registered and sold on platforms such as the NFT exchange, and those who wish to own the works can bid for or purchase them directly.

The price of robot NFT works is variously determined by the popularity of the work, unique factors, and the artist's reputation, and tends to be greatly affected by the trend of the times, the release of new animations, and the product life cycle.

In the case of internationally popular robot characters, their recognition and trading volume are increasing not only in kind but also in the NFT trading market, making it a market where individuals have many advantages not only as a hobby but also from a technology perspective.

# 1. Current Status of the International Online Robotics Trading Market

According to an article in the U.S. Outlook Internet edition, there are five reasons to buy a robot NFT.

1. It is applied to various play-to-earn models
2. Commercialization is expanding as various robot metaverse markets are forming
3. The trading market for robot-themed NFT works is highly active, and the trading market for robot NFT production creators and individual collectors is active
4. There are many ways to make automatic profits because it is easy to configure and establish DAO through robot NFTs
5. The entry market that can enter at the lowest cost is well established

## 2. RoboNODE, a view of world

Earth, which has never been invaded by aliens in five billion years, the most beautiful planet that alien species have sought to conquer, due to its abundant resources and beautiful nature.

The Taleturan, an alien robotic race 500 light years from Earth, finally sailed five years into the Earth's orbit to conquer Earth, where they could easily obtain water, electrical and nuclear energy, abandoning their already polluted planet, as they developed a hyper-spaceship that could travel at tens of times the speed of light.

More than 1,000 Taleturan robots, consisting of attack groups, operations groups, infiltration groups, resource collection groups, and senior officers, are planning to establish their own base, starting with the Amazon, and overthrow major cities such as Seoul, Tokyo, Beijing, Hanoi, New York and Paris.

The Earth is now entering an era of unprecedented space war in history as governments around the world are preparing for space attacks in search of weaknesses in the hyper-spaceship of the Taleturans, which has already reached the stratosphere and are ready to fight.

Will the Earth, where 7 billion humans live in peace, be conquered by the alien robot species Taleturan?

### 3. RoboNODE Applied Blockchain Technology and Application Method

We design a trading platform through ERC721 technology, which is most commonly used to implement NFTs for trading, generating, and minting various robot NFT works. When implementing technology through design completion, the Robonode business platform will have the following characteristics, technical advantages, and characteristics.

The platform allows individual creators to freely create and mint robot-themed NFTs

1. By providing basic robot NFT production tools on the platform, various individuals will participate to create their own robot works and provide a launching pad function that can mint them on the Ethereum blockchain.
2. The ability to exchange information and trade works with global users at all times without restrictions on time and place : Through ERC721 technology, we will set prices for works and implement various trading methods (market prices, time sales, auction prices, etc.) to provide a trading method that meets the needs of various markets and individuals, providing a platform that is attractive to all users.
3. The DAO method allows the selection and auction of popular robot NFT works to activate transactions according to market demands : Among the robot NFT works traded and released, we will select the most interested, liked, and traded works in real time and automatically display them on the top of the business platform in a DAO manner to boost the willingness of participating creators to participate.

## 4. RoboNODE ecosystem participants and benefit to them

### 4-1. NFT Production Creators

Launching various robot-themed NFT works on the Ethereum-based NFT platform, exchanging information with many users to promote their works internationally, quickly raising their awareness, and ensuring stable work creation activities through the sale of works and the income of indefinite resale royalties.

### 4-2. Individual and institutional collectors trading NFT works

The demand for popular NFT works is very hot.

Market participants trading spot in the traditional spot robot figure market are entering the NFT robot market as their understanding of the NFT market increases.

Individual and institutional collectors will be able to collect works, purchase series by theme, and resell them again, thereby securing a fairly high and stable resale revenue.

### 4-3. NFT works wholesalers (aggregators)

Commercialized NFTs will also be an attractive opportunity for wholesalers who purchase them in wholesale form and release them in bundles at other international NFT marketplaces, and collaborate through the launch of separate collections in the international NFT trading market.

## 5. RoboNODE Fandom boosting plan

In the case of products with strong individuality such as robots, securing a fandom that loves and supports these works is the most important factor.

Unlike simple character products, robots have distinctly different personal preferences and have a strong image of a kidult market, so-called mania market rather than being traded in the general public market.

It is a plan prepared to secure economic incentives and fandom by providing more coins to early coin buyers in order to secure market awareness in a short period of time and to secure enthusiasts.

Purchasded Qty	Incentive Rate
5,000 ~ 9,999	10%
10,000 ~ 19,999	15%
20,000 ~ 49,999	20%
50,000 ~	30%

Robonode Fandom boosting plan budget

## 6. RoboNODE Wallet

We are planning a web 3.0 wallet with a variety of functions so that enthusiasts can trade and use it with more attachment by presenting the types of robot NFT products currently available, vision and status of revitalizing the platform market.

## 7. Budget allocations

The success or failure of a business depends on the launch of a variety of NFT works, support for a variety of creators and traders, the creation of a stable business platform, and strong marketing in the global market in a short period of time.

To achieve this goal, RoboNODE has allocated a coin-type budget to each essential area so that each goal can be achieved on time and a stable business platform can be built within budget and actively promoted internationally in the global robot mania market

**Coin Name : RoboNODE**

**Ticker: RBND**

**protocol: ERC721**

**Total supplying Quantity:**

**300,000,000**

total supply : 300,000,000		
Team and Advisor	5%	15,000,000
Foundation reserve	15%	45,000,000
Token Sale	10%	30,000,000
Global Marketing	20%	60,000,000
Showcasing global robot NFT fair	20%	60,000,000
Fandom boosting plan budget	30%	90,000,000
total supply : 300,000,000		

## 8. Roadmap

2023

Q2

RoboNODE Established

Q3

Investigation of International Robot NFT  
Commercialization Trend

Q4

Robot NFT web 3.0 Wallet Production  
First Listing on the International Exchange

2024

Q1

Participate in the International Robot NFT Online  
Exhibition

Q2

SECOND LISTING ON INTERNATIONAL  
EXCHANGE

Q3

Business platform worldview expansion 2nd time

Q4

Additional NFT Exchanges To Expand International  
Markets

## 9. Discliamers

1. This white paper is designed to guide RoboNODE's business, and its schedule and detailed plan may change due to changes in market conditions, and this will not be notified in advance.
2. The version of this white paper is based on the version indicated at the bottom of the document and reflects only the business direction and progress of this white paper, so it may be changed without notice even after production is completed and distributed.
3. This white paper is not prepared for the purpose of raising funds or receiving investment, and no one can raise funds or attract investment based on this white paper, and the act of sending this white paper does not imply an investment proposal.
4. This white paper is not intended to propose an investment or recruit investors, and should not be interpreted as an investment proposal or an act of recruiting investors under any geographical or environmental circumstances.
5. The allocation of RoboNODE coins is contracted through a separate contract with this white paper, and the terms of the contract are as specified therein. If the contents of this white paper do not match or conflict with the contents of the contract, the contents of the contract shall be applied first.
6. The contents of this white paper prohibit the reproduction, modification, and distribution of all or part of the relevant business in countries or regions where it is illegal. In addition, if people in countries and regions who make this white paper illegal recognize and invest in this white paper, such investment is at their own risk and the RoboNODE Foundation has no legal responsibility for it. RoboNODE, as defined in this White Paper, shall not be construed as a financial investment instrument in any case, such as bonds, stocks, securities, options, derivatives, etc., and shall not be claimed in any case.
7. RoboNODE does not guarantee interest income or principal guarantees under any circumstances, and RoboNODE buyers should not interpret RoboNODE's purchasing behavior as an investment and profit-generating act, and no one should understand or recognize it as an entity that can earn financial income such as investment income and interest.
8. RoboNODE is fully functional from the moment it sends the token to the wallet.

## 9. Discliamers

9. This White Paper does not guarantee the completeness of RoboNODE's business, and Contracting Parties wishing to use RoboNODE may use RoboNODE's services only to the extent specified in the White Paper.

10. The content of this white paper is not responsible for any errors or delays in the delivery and development of the service, nor can anyone be held responsible for any delays in the schedule and related matters.

11. This white paper was prepared based on a plan for future plans and based on the realization of the plan. However, the implementation of the plan is not guaranteed, and the contents of this white paper do not guarantee the integrity of future developed services.

12. The contents of this white paper cannot be interpreted as legal, financial, accounting, tax advice, etc. In the process of purchasing and using RoboNODE, separate legal, financial, accounting, and tax situations may occur according to each country and region's policies and laws. Purchases and users of RoboNODE may need additional advice, and RoboNODE is not responsible for this.

13. Implementation of the business model may be delayed or other tangible or intangible losses may occur due to unintended reasons by RoboNODE, such as system attacks from third parties, natural disasters, and force majeure reasons.

14. RoboNODE cannot be held responsible for the buyer's risk due to the loss and leakage of the buyer's private key.

15. It is not free from all risks, including falling coin values and changes in the market environment, uncertainties, political risks, competition with competitors, which may disrupt RoboNODE's development, or change its service direction and business execution plan, which may not be notified in advance.

16. RoboNODE is a technology currently under development, so changes in technology that may occur during the development of the technology may negatively affect RoboNODE.

17. RoboNODE does not delegate or transfer all decisions, including ecosystem operation policies and suspension, to others, and all business-related decisions are subject to the autonomy of the RoboNODE Foundation and participants.
